

INFORMATION SYSTEMS PROJECT MANAGEMENT

FIVE DAYS

Prerequisite

Understanding of Business Systems Analysis & Design methods.

Who Should Attend

New to experienced project leaders or team members who are, or will be, managing or involved with Information Systems (IS) projects. This includes information systems and user/client personnel. Both will benefit from this workshop.

Course Description

Information Systems Project Management provides the tools, techniques and methods to help effectively manage large and/or small IS projects. A case study, individual and team exercises provide a total perspective of how the tools and techniques fit together to assure project success.

Benefits of Attendance

Upon completion of this workshop, students should be able to:

- Apply appropriate planning tools, techniques and methods for even more effectively managed projects.
- Establish clear project scope, objectives and well-defined requirements.
- Use project management tools which aid in task breakdown, project team organization, and communication to staff and management.
- Determine and schedule the resources required to complete the project.
- Maintain management commitment through implementation, control and reporting of the project's progress.
- Evaluate the project's results and successfully manage necessary change.
